Power

## 1

## CONNECT

Unplug all the cables including the power cord from the back of the current modem (if a router is currently connected, unplug the power cord from the router).

Connect the cable from the cable wall outlet to the cable connection on the new modem. Make sure this connection is finger tight.

Connect the Ethernet cable from the computer or router to the Ethernet connection on the modem. If connecting to a router, be sure that it is turned off at this time.

Plug the power cord into the modem and into an electrical outlet. If a router is connected, connect the power or turn it on as well.

## 2

## ACTIVATE

Online  
Flashing = Wait

Online  
Steady = Ready

Wait for the online connection light on the front of the modem (may be labeled: Online, Sync, Cable or Ready) to stop flashing and remain lit. Once the light is solid, open up a web browser.

## To activate your service

When the registration page appears, use the account number from a monthly statement to complete the activation process.

## WiFi@Home

To connect to the Wi-Fi network, choose the network name or SSID and enter the pre-shared key or passphrase. This information can be found on the bottom or back of the modem.
